Rollei **Mogopod 1**

www.rollei.com

Rollei since 1920

- Rollei Mogopod 1 is made for photography Hobbyists and Professionals. It is an easy to take and multifunctional photographic equipment, with a special fast adjust system and two different top extensions. With the Mogopod 1 there is no more need for complex photographic accessories.

Surface
The Mogopod 1 is covered by foam rubber with high stability and long term resistance. This makes the handle softer and more flexible and works also sound absorbing and heat insulating.

Extensions
The Mogopod 1 comes with two different top extensions with 3/8" screw or 1/4" screw. With these extensions all kind of video or camera equipment can be connected to the Mogopod 1.

Fast Adjustment System
The Mogopod 1 has a unique drive system for a fast adjustment of the height. It can be used as monopod, flashlight holder and microphone boom. Since the Mogopod 1 can be stretched out and draw back smoothly, it also can be used as a camera crane.

Mark
With precise marks on the tube and a convenient locking system. The marks are helpful to adjust the right height and can be used also as a measure tool.

3-legs
The Mogopod 1 adopts the unique iFootage 3-legs locking system. You only need to open or close the legs, then twist the button at the bottom, and the locking is completed.

Ball Head
With the special ball head provided in the Mogopod 1, it can not rotate in horizontal direction. The size tolerance of machining accuracy is ± 0.05 mm, so the locking strength is larger than from others with the same head size.
